

HOW TO FOLD A PREFOLD DIAPER

Prefolds are made of 100% certified organic twill, and they are wonderfully thick and thirsty! The small and large sizes are 4 x 8 x 4 ply, while the preemie size is 2 x 6 x 2 ply. Prefolds are extremely versatile and can be folded in different ways to make sure there is ample absorption where it is needed.

BASIC FOLD

FOR MAXIMUM ABSORBANCY IN THE FRONT

TIPS

1. Make sure that the insert and liner are completely contained inside the wrap. Any bit of fabric sticking out of the wrap can cause leaking.

2. Do not tuck the insert into the front flap on the inside of the wrap, as this flap is meant to prevent leaking through the sewing line.

3. Fasten the wrap snugly enough so that it fits well and does not sag. Saggy diapers may leak!

4. Use the fan fold for runny newborn poop. And don't be afraid to try out the bikini twist! It may take a few tries to master it – but it also works really well for runny poop.

Try the following two folds with newborn babies and beyond! They will contain runny poop.

FAN FOLD

BIKINI TWIST

Lay diaper flat on diaper cover and place baby on top. Grab the bottom right corner with your left hand, and the bottom left corner with your right hand (so that your arms are crossed). While holding the diaper, uncross your arms so the diaper twists in the middle. Bring the front half of the diaper all the way up baby's tummy and fasten the diaper cover. Any excess diaper can be folded down in order to fit within the cover.
